

Welcome to the Police Station of the 21st Century!

THE CHALLENGES

It goes without saying that absolute security is extremely important in a police station. Certain areas must have restricted access and it is critical that identity is determined before access is granted.

The police chief and his command team need to have full control of access to all entry points and especially to the most sensitive ones that might contain narcotics, cash money and other valuable information.

ID access control cards can be used by others, lost or stolen and even the biometric access control systems are not secure, as officer can be under threat. Police departments are looking for a solution that is always available and easy to use, while at the same time non-transferable. Further, police want and need a cutting-edge technology that is competitively priced and able to be upgraded.

THE SOLUTION

SafeRise®

Now imagine a solution where the entrances to secure areas recognize you by the way you look, talk and walk, be aware if you are in distress and can carry a conversation...and that's only the beginning.

SafeRise® modernizes the way people enter buildings, offices and secure areas using second generation biometrics with a fusion of face, voice, license plate and pattern of behavior recognition that provides easy, automated, and convenient identity management access while maintaining the highest level of security.

SafeRise requires no key, no card and no code, because the face and voice of authorized personnel works like a key. You are the key to smart access control in the 21st century.

APPLICATIONS

Evidence and file rooms are critical to supporting investigations, assisting in successful prosecution at criminal and civil trials, in facilitating the timely return of property to its rightful owners, and in maintaining the public's confidence and trust.

Officers also need easier access to the department's **swat locker** and better accountability of its inventory, which they can't afford to lose or misplace.

SafeRise makes access easier and more secure. For instance a registered person can enter the evidence room by just walking to the door. The system recognizes and identifies him and then lets him enter without missing a beat. SafeRise also provides a **detailed log** of who entered including face, voice, behavior, time, and date.

If there are two people trying to get in, the system makes sure it recognizes either by face or by voice. If not, the system transfers the event to the control room, which then has **FULL** control and knows who is entering. This is especially useful because the system can also identify if someone is **under stress or in danger**.

Another SafeRise application is **investigation interviews**. Many people show up to be interviewed as victims or witnesses of a crime. The system speaks with the person and then provides the investigating officer the information of the person's name and purpose of the visit. The officer has **FULL** control and can speak with the person and let them in right from his desk. No need for the busy front desk to be bothered! If the officer is not in the building, the system lets him know through his mobile phone. He can then speak to the person directly and even let them in remotely.

There are many other applications where SafeRise can replace a regular access control system including **holding cells** where officers can accurately keep track of the comings and goings of prisoners and the **office of the chief of police** who can now know who and when anyone entered his office.

BENEFITS

- Highly accurate
- Set different user rights for each person
- Can identify if one or more person at the door- open automatically, or contact, the control center
- Eliminates costs of cards and ensures long lasting ROI
- Reduces internal theft
- Simplified deployment, implementation and use
- System supervision and monitoring of failure
- Strengthen audit trail by means of true identification
- High user acceptance through increased convenience
- Answer and open doors securely through your mobile phone
- No need to buy additional systems

SafeRise allows the police to benefit from increased identity assurance, operational efficiency and reduced costs. Welcome to the Police Station of the 21st century!
